

New design possibilities with Eyeleds® ColorEYE®

With its innovative LED lighting systems, Eyeleds® gives your floor the absolute finishing touch! Unique to Eyeleds® are the wide range of choices, the flexibility and, last but not least, the ease with which the floor installer can fit the lighting at the same time as the floor is laid. This ease of installation is the result of the extremely shallow depth (only 6.5mm) of the lighting. As a consequence, it is possible to use Eyeleds® in floors and other materials with a thickness of 7mm or more.

Choose the colour of lighting that suits your mood and achieve the right atmosphere with ColorEYE®!

What is so special about Eyeleds® ColorEYE®?

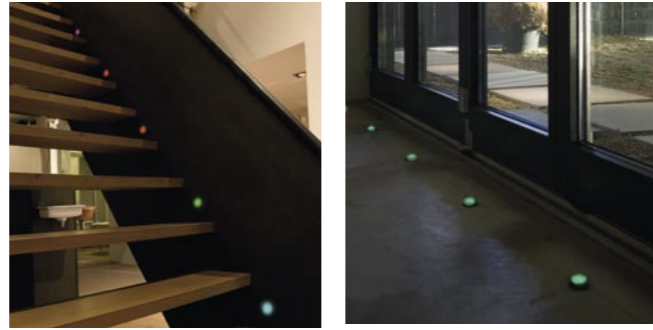

The ColorEYE® systems utilise RGB technology, which stands for Red, Green and Blue. By mixing these primary colours, countless new colour (combinations) can be realised. The ColorEYE® assortment consists of a simple version with a pre-programmed colour-change function, the ColorEYE® CS ("Color Stop") system and an advanced programmable version, the ColorEYE® Pro ("Programmable") system.

The ColorEYE® CS (Color Stop) Assortment

Like the standard Eyeleds® assortment, ColorEYE® CS is available as chain systems, specifically intended to be used in floors and as a separate connectable system ("multi-connector"). After being switched on, the ColorEYE® CS starts with a blue colour and then continuously slowly changes in colour in a cycle lasting about 10 minutes. After 10 minutes, blue appears again and a new cycle commences. Within the cycle, an extensive colour pallet passes by, enabling you to fix the colour of your choice at any moment. The desired colour is fixed by briefly switching the system on and off. If this process is repeated, the system continues its colour-change program.

The ColorEYE® Pro (Programmable) Assortment

ColorEYE® Pro is an advanced DMX/EIB-compatible LED lighting system that is only available as a separate connectable concept ("multi-connector"). The control panel, the so-called sequencer, is at the heart of the ColorEYE® Pro system. The sequencer is installed in the normal wall socket and has buttons to set and store the desired lighting colour and brightness. The sequencer can also be used to choose two colour-change programs: a "rainbow-effect", with all individual lighting units displaying a distinctive colour cycle and a "colour sweep-effect", with a pulse of white light being sent back and forth through the lighting units, upon which the system repeatedly assumes a new colour. The speed of this colour-change effect can be increased or decreased

as desired. An extensive choice of accessories offers tailor-made solutions for the use of ColorEYE® Pro in both smaller and larger projects.

High-quality, Durable and Flexible

Like all the other Eyeleds® systems, Eyeleds® ColorEYE® complies with the strictest quality and safety requirements for indoor floor lighting. The hard-wearing, waterproof (IP67) housing is made from stainless steel and is fitted with UV resistant materials. By working closely with specialists from the flooring sector, the ColorEYE® system is designed in such a way that the installation does not necessarily have to be performed by a qualified electrician. A clearly written manual contributes to a simple and safe installation and produces an optimum end-result. Have a look on the website for a first impression!

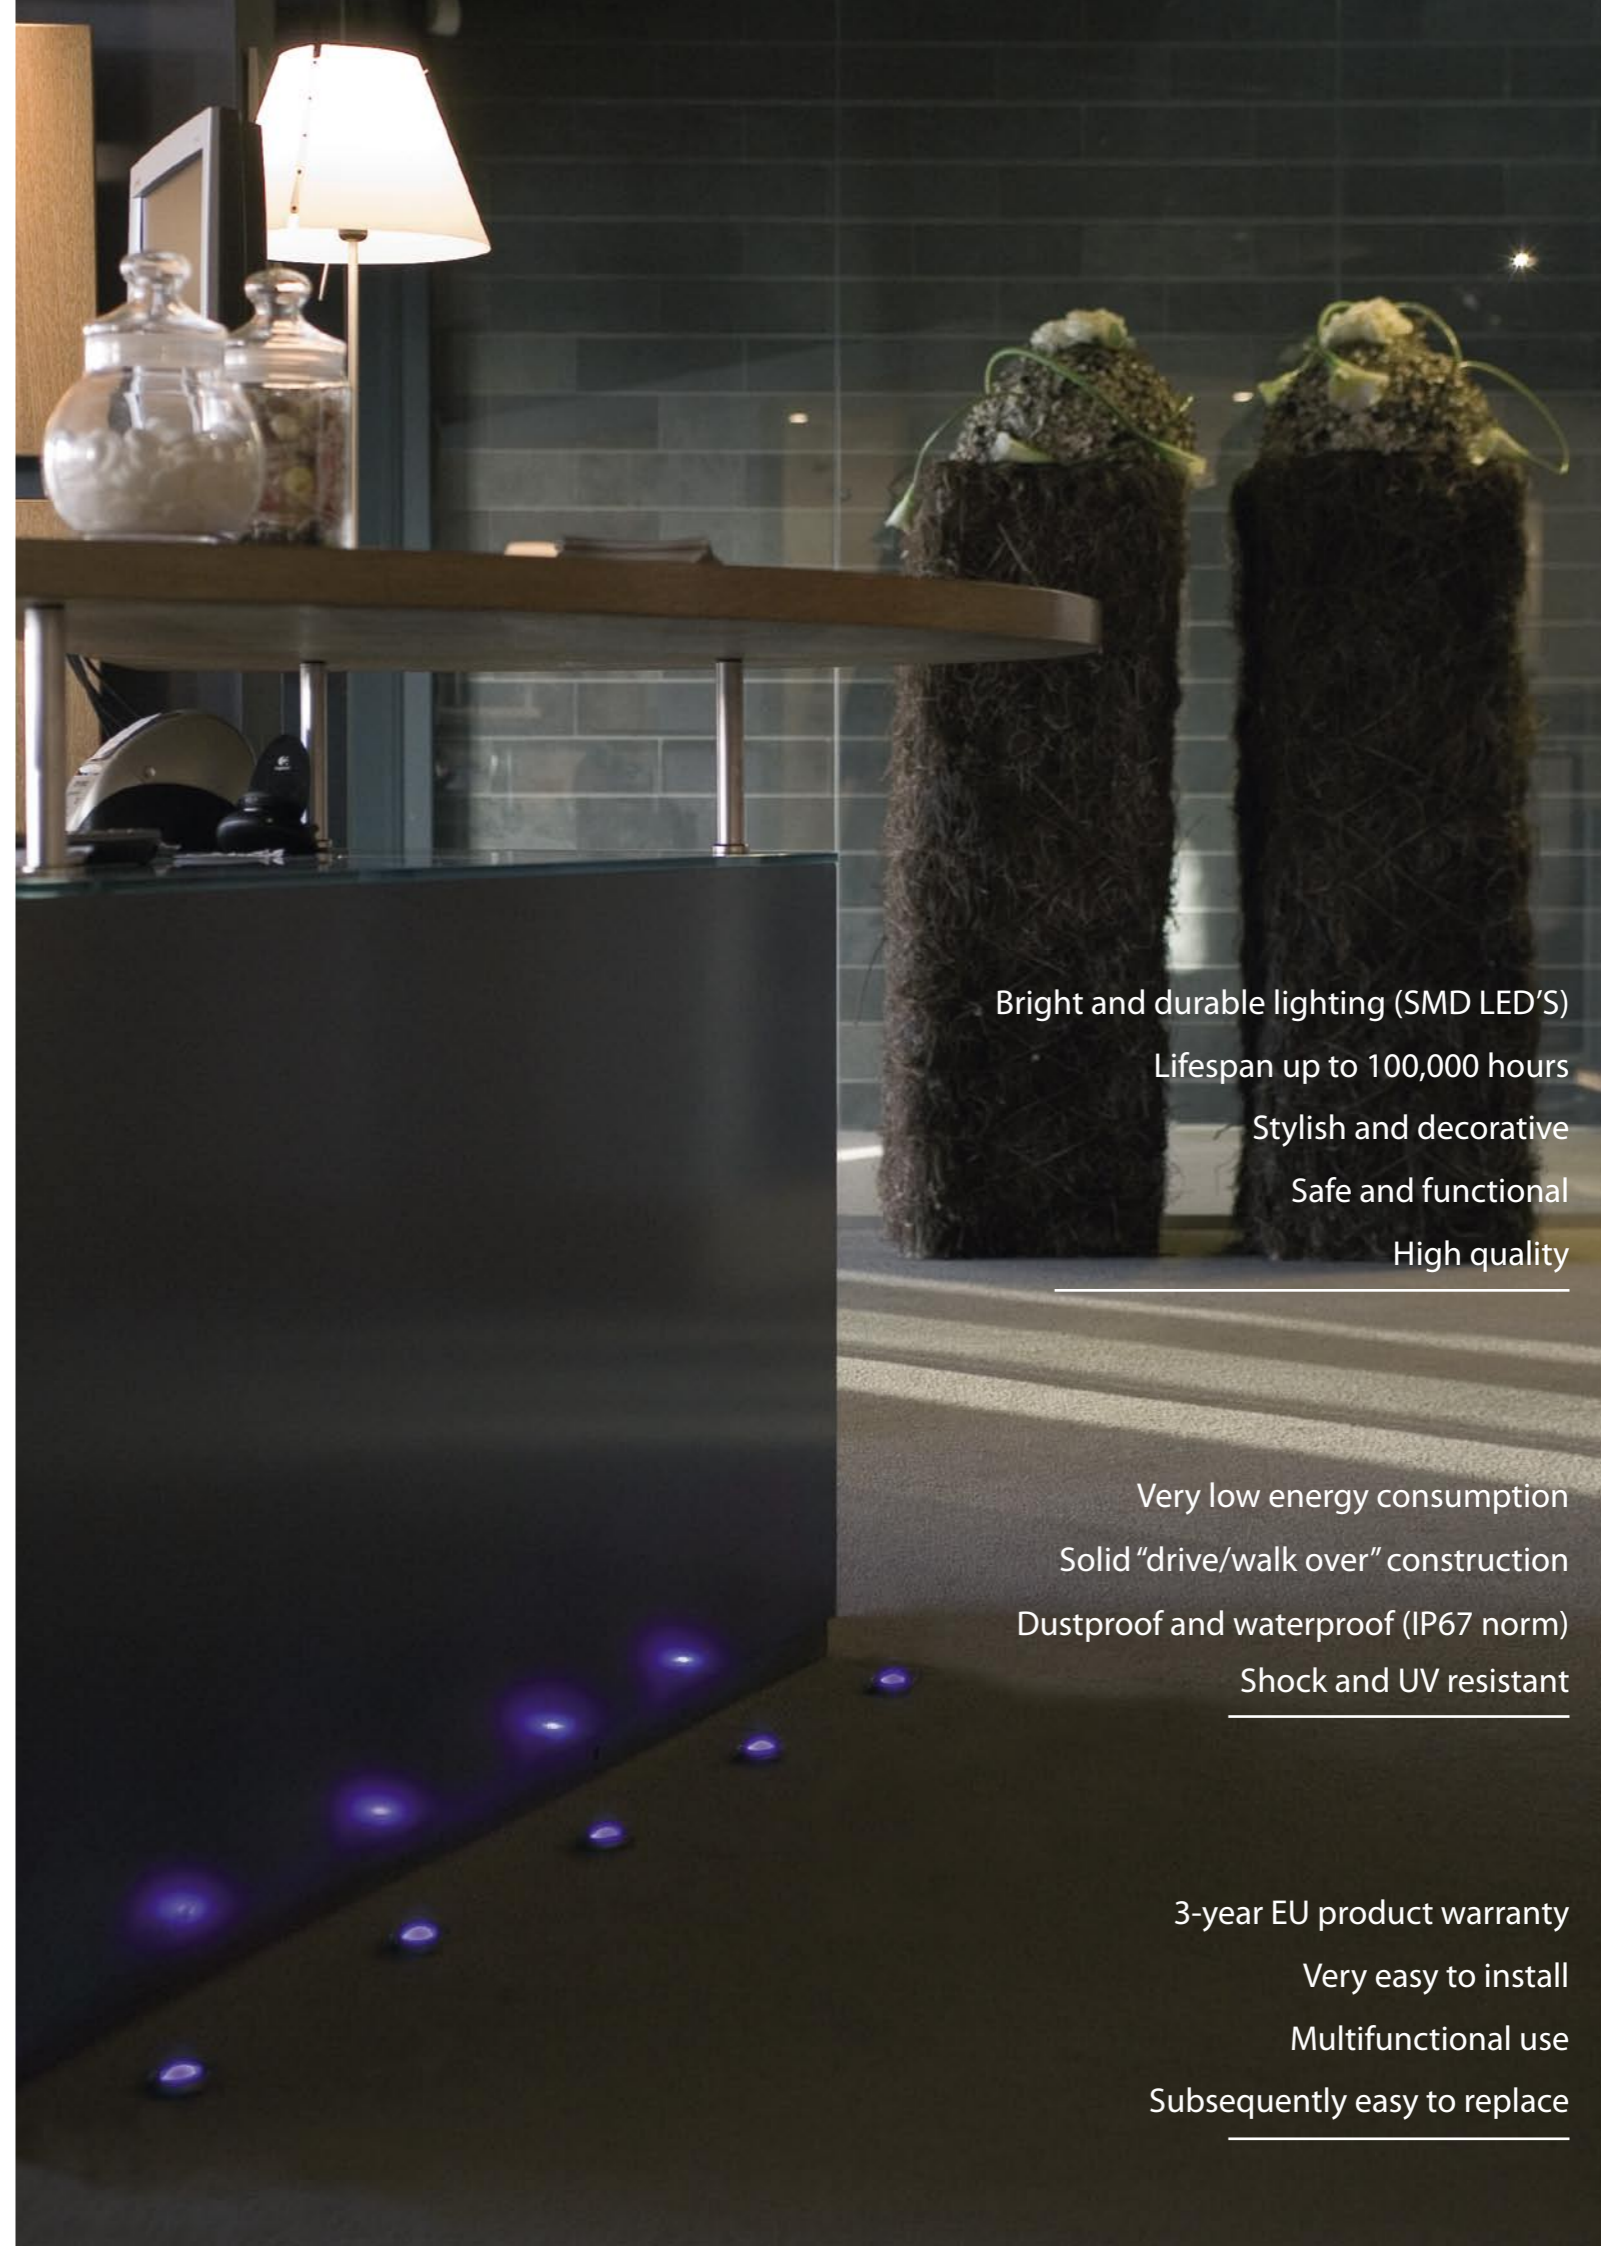

Energy consumption, Installation and Maintenance costs

The electricity costs of the ColorEYE® systems are very low. Because Eyeleds® achieves an average life of 100,000 hours, the lighting needs virtually no looking after following installation and the maintenance costs are actually negligible. Should problems nevertheless occur, an individual fitting can easily be replaced without the floor being broken open.

Timeless and Stylish

People with many different backgrounds have already discovered the added value of Eyeleds® and value both the functionality and the stylish and timeless character of the product in its various applications. ColorEYE® also offers new creative uses of dynamic lighting in world of gastronomy, the hotel and catering field or other commercial and industrial buildings. The worldwide expansion in the use of Eyeleds® products in prestigious projects bears witness to this!

Bright and durable lighting (SMD LED'S)

Lifespan up to 100,000 hours

Stylish and decorative

Safe and functional

High quality

Very low energy consumption

Solid "drive/walk over" construction

Dustproof and waterproof (IP67 norm)

Shock and UV resistant

3-year EU product warranty

Very easy to install

Multifunctional use

Subsequently easy to replace

The different versions:

ColorEYE® CS - Color Stop

Max. 22 pieces to connect on 1 power supply recess CS

Brushed stainless steel / RGB LED

ColorEYE® Pro - Programmable

Max. 18 pieces to connect on 1 power supply Pro

Brushed stainless steel / RGB LED

Eyeleds® ColorEYE®

ColorEYE®CS System Components:

1-L Multi Connector Chain system available as: 3L, 5L, 8L & 20L

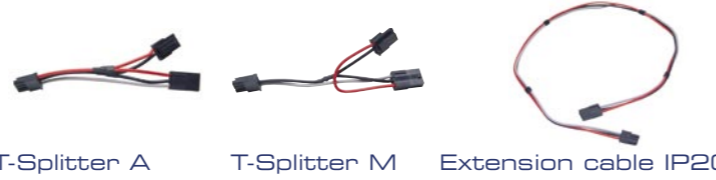

Power Supply Recess T-splitter Extension cable

ColorEYE®Pro System Components:

1-L Multi Connector Sequencer Power Supply

T-Splitter A T-Splitter M Extension cable IP20

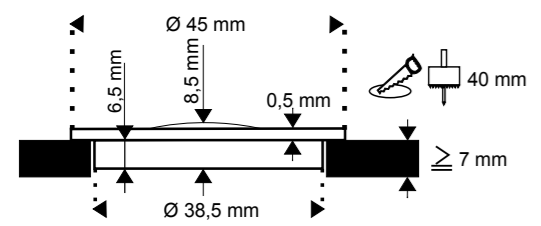

Converter cable IP20 → IP67 Converter cable IP67 → IP20

Repeater 2-way Repeater 5-way
